The perfect solution for:

Domestic Homes Multi Occupancy Apartments Private Landlords

The Atlantic Sokio Vertical panel heater takes everything the Sokio Horizontal has but compacts all those features into a vertical style to provide space-saving efficiency and extra flexibility in choice of location.

Designed with an aluminium plate face to provide soft, homogeneous heating that can quickly heat up the room. Combining a clean, asymmetric style makes this the perfect electric panel radiator for any modern setting.

Engineered to offer continuous home heating along with easy-to-use LCD digital controls to allow the user to switch between comfort and eco modes. The open/closed window functionality allows the electric panel heater to detect whether a window is open or closed in the room and automatically adjust its heat output to avoid energy wastage.
