COZYTUCH ZIGBEE HUB: INTELLIGENT PROGRAMMING

The Cozytouch Zigbee Hub is an upgraded version of the original Atlantic Cozytouch, featuring a more robust RF communication system. This enhanced system allows homeowners to seamlessly connect up to 20 Atlantic electric heating and hot water appliances throughout their property.

To provide homeowners with complete control over their Atlantic electric heating and hot water appliances, the Cozytouch app offers real-time monitoring and reporting. View detailed reports on running costs per appliance and energy consumption per room, and easily adjust temperature settings or create personalised hot water and heating schedules for each appliance.
