The perfect solution for:

Living room
Kitchens
Bedroom
Hallways
Dining Rooms

The Galapagos vertical electric radiator boasts state-of-the-art heating technology housed in a modern and stylish body. Available in Arctic White or Charcoal Grey, its smooth, curved aluminium panels ensure even heat distribution and energy efficiency.

Engineered for a luxurious and sophisticated experience, the Galapagos vertical electric radiator features a 2.4" TFT colour LCD display with a knurled control wheel to offer the homeowner effortless control over their heating controls. In addition, the buttons featured on the control panel have been made 30% larger than the original Galapagos to make the electric radiator as user friendly as possible. To offer adaptability the Galapagos vertical electric radiator's control panel is reversible meaning it can be used on either side making it easier to install in space restriction locations. Equipped with absence and presence detection technology, it uses light and motion sensors to monitor and adjust temperature settings, reducing energy consumption.
